

I am Hard of Hearing. I do need them compatible with hearing aids. I wear two hearings aid, Denmark model. Behind the ear model. Having those features on the wireless phone, I would be able to understand to what hearing people say. It also good for job wise and economy. It would helps to make sales because the more we use it the better. I am the sales person, and I use the phone all the time. The more the sale that I make the more other companies make also. Those with compatible are very helpful for me. I really needed them.
